

# User Access Rights

You can set individual access rights to different modules and functions in the Web Management System for users by using this function. To access this function, simply navigate by

*ADMINISTRATION > USER MANAGEMENT > [Any Existing User] > [More Options] Access Rights*

Simply tick the modules and functions you wish to set for the individual User Account and click **UPDATE** once you are done.

Please note that accounts with Administrator privileges have access to all functions and modules.
